

ABSTRACT OF THE DISCLOSURE

MOBILE WIRELESS MANAGEMENT OF SERVERS AND OTHER RESOURCES

Mobile wireless management of servers and other resources is disclosed. A system is disclosed that includes a resource, such as a server or a network platform, and one or more mobile wireless consoles. Each mobile wireless console at least indirectly communicates with the resource over a wireless network, in accordance with an open, common, and non-proprietary protocol, to manage the resource. The system may include an intervening wireless gateway between the mobile wireless consoles and the resource, where the gateway may be located outside of a firewall. The open, common, and non-proprietary protocol may be a version of the Wireless Access Protocol (WAP), an Internet Protocol (IP)-based mobile protocol, or another type of protocol.
